Corporation

KNOW YOUR BIOPAK PACKAGING SYMBOLS

Disposal

Industrially compostable

Home compostable

Compostable

These symbols identify packaging that is independently certified as either home or industrially compostable. Industrially compostable certified products will disintegrate within 12 weeks for industrial composting and 180 days in home composting conditions. Certified home compostable products will biodegrade within 365 days in home composting conditions. We list the certification standards and our unique certificate number.

Recyclable

This packaging can be recycled through kerbside recycling collection – just make sure it's rinsed clean and free from grease and oil.

Product Materials

Responsibly Sourced Paper and Wood

We only use raw materials from responsibly managed plantations, including FSC™ certified plantations.

Bioplastic/ Polylactic Acid (PLA)

Our plant-based bioplastic packaging is either home or industrially compostable and has a lower carbon footprint than conventional plastic packaging. It is not recyclable with conventional non-compostable plastics.

Plant Fibre

Our plant fibre packaging is made from reclaimed and rapidly renewable sugarcane pulp – a by-product remaining after the juice has been extracted from the sugarcane refining industry (that would otherwise be burned). Plant fibre packaging can be recycled in the cardboard stream if not contaminated with food.

No-Added PFAS

Since July 2024, we have ceased all production of plant fibre products containing intentionally added PFAS. All items in our plant fibre ranges marked with "-PF" are now manufactured without added PFAS.

*Older product versions may continue to ship until current stock runs out.

Conventional Plastic

This type of plastic is well-marked so you can identify whether they're kerbside recyclable – they are **not** compostable.

Product Features

Customisable

Our experienced design team is here to assist with custom branding or bespoke mould sugarcane fibre solutions.

Hot or Cold Use

Our hot food friendly packaging is grease-proof and sturdy, and will retain its structural integrity whilst holding hot food. Our clear bioplastic cups and bowls are cold use only.

Microwave & Oven Friendly

We have noted which packaging is microwave and/or oven safe. Our sugarcane takeaway range can go in the oven at temperatures of up to 220°C for a maximum duration of 20 minutes.

Freezer Friendly

This symbol means the packaging is freezer friendly, however the structural integrity will vary depending on the food contained when frozen and thawed. We can supply samples for you to conduct testing.

PACKAGING THAT PUTS THE PLANET FIRST

**Packaging Made
From Plants**

**Responsibly Sourced

GO CIRCULAR

The traditional economic model follows a linear path: take, make, waste. BioPak is committed to disrupting this outdated model and investing in a waste-free future — where innovative design and corporate responsibility intersect to create a circular, regenerative economy.

Plant-Based Raw Materials

We use rapidly renewable, plant-based materials designed to have a low impact on the environment at each stage of their life cycle. A great alternative to traditional plastics made from finite fossil fuels. Our certified compostable products are designed to break down in either a home compost or industrial composting facility, turning waste into nutrient-rich fertiliser. A simple way for businesses to make better choices, without compromising on quality or performance.

www.biopak.com/uk/responsible-materials

The End is Just the Beginning

Our products are designed to turn into compost — a new, valuable and locally produced resource at the end of their useful life. A thin layer of compost can mitigate climate change by improving the soil's ability to stabilise carbon and by increasing plant growth, which pulls more carbon dioxide out of the atmosphere.

Responsible Supply Chain

Our global standard range complies with ISO environmental standards and corporate social accreditations like Sedex. We also certified our products either home and/or industrially compostable.

Compostable Solution

Did you know that the methane gas emitted from food in landfill is the third largest contributor to climate change?

Compostable packaging can help divert food scraps from landfill, avoiding harmful greenhouse gas emissions. Both food waste and compostable packaging can go in the same bin to be turned into nutrient-rich compost. There are a growing number of residential compost collections across the UK.

Find your local composter at Compost Connect today at compostconnect.org/uk

Net-Zero Commitment

BioPak is proud to align with the Science Based Targets initiative (SBTi)-approved target of achieving net-zero emissions by 2050. We are committed to reducing our emissions by 50% by 2030 and 90% by 2050. This target reflects our commitment to ambitious emissions reductions in line with the latest climate science. Despite global challenges, our net-zero goal will drive meaningful change by setting standards that ripple through the entire supply chain and industry.

Learn more about our Emissions Reduction Plan at www.biopak.com/sustainability-report-jan-dec-24

GIVE BACK FUND

£2,703,081

As a profit for purpose business, we are driven to preserve and protect the environment and give back to the communities we live in. We started the BioPak Give Back Fund in 2012 and have since dedicated our time, energy and a total of £2,703,081.

126,081,229 Tonnes of Plastic Avoided

At BioPak, we champion the transition to a circular economy with plant-based, industry-leading products. The majority of our product range is made from renewable materials and certified compostable. Since 2010, we've worked with our customers to avoid 126,081,229 tonnes of plastic.

204,390 Trees Planted

We're committed to protecting and restoring rainforests, donating 1% of our profits to support global environmental initiatives. Since 2021, we've funded the planting of 102,479 trees through our partnership with Ecologi. Altogether since 2010, we've planted 204,390 trees worldwide and helped preserve eight hectares of endangered rainforest.

5640,465 Meals Donated

Through our collaboration with Worcester Foodbank and other global partners, we have provided over 560,465 meals to individuals in need.

Saving Lives With MedEarth

Millions of people around the world lack access to basic healthcare, while perfectly usable medical supplies are often discarded as waste. That's why we're proud to partner with MedEarth to help bridge this resource gap by redistributing surplus medical equipment to where it's needed most. With our support, MedEarth has delivered life-saving aid to developing countries and positively impacted 350,000 lives. This collaboration reflects our shared commitment to protecting the environment and making a meaningful difference to those in need.

CUSTOMISE YOUR BIOPAK

**Free Design
Services**

**Fast
Production**

**Free Storage
& Pay-As-
You-Use**

**Never Run Out
of Stock**

Make our packaging, your packaging. Add your branding or designs to our range of products, from printing stripes on straws, logos on lids, or copy on cups.

You can also work with our industrial designers to create a new shape, size or mould — or create an entirely new packaging solution for your industry. We're here for every idea — from oyster trays to taco holders, beer rings, and everything in between.

A REUSE SYSTEM THAT IS BEAUTIFULLY DESIGNED

Huskee designs functional and beautiful reusable products made from waste and recycled materials to accelerate the transition to a waste-free world.

HuskeeOriginal

Crafted from coffee husk, a by-product of the cherry processing industry. Available in retail-ready packaging and bulk packs.

HuskeeRenew

Made from Tritan Renew 50, a high-performance plastic which is certified 50% post-consumer recycled material. Sleek, stylish and sustainable.

HuskeeSteel

Made from 91% post-consumer recycled stainless steel, reducing the demand for raw materials. Durable, dual walled and vacuum-sealed.

HUSKEE'S REUSABLE SOLUTIONS

Huskee reusable coffee cups and lids offer a durable, beautiful and practical solution to reduce single-use waste. Huskee products are made from waste and recycled materials, accelerating the transition to a waste-free world and minimising the need for disposable alternatives. Place your orders today!

SINGLE USE PLASTIC BAN UK

WHAT PRODUCTS CAN YOU USE?

BioPak supports single-use plastic bans and offers sustainable approved alternatives for all banned items. Alternatives include FSC™ wood and paper products, plant-based packaging and home compostable Aqueous lined products.

The following information reflects all bans regulated as of August 2023. More detail available at www.biopak.com/uk/single-use-plastic-bans

*Exemptions in each region allow the supply and use of some banned single-use plastic items for specific circumstances.

* Please ensure compliance with the bans by using only certified compostable items (Home Standard NF T51-800 or Industrial Standard EN13432) in regions where they are accepted as the only alternative to banned plastic items.

You can still supply single-use plastic plates, bowls and trays if either of the following apply:

- You are supplying them to another business
- The items are packaging (pre-filled or filled at the point of sale)

Some examples of packaging are:

- Takeaway
- Delivered food
- Bowls filled at the point of sale
- Food sold in retail

Sectors that are not exempt include, but are not limited to:

- Office canteens where food is consumed on site
- Retailers who sell these items to consumers e.g. a pack of plastic plates sold for a family picnic

The above are guidelines and may vary depending on your specific use case. The full details can be found here <https://www.gov.uk/guidance/single-use-plastics-ban-plates-bowls-trays-containers-cutlery-and-balloon-sticks>
